AMENDMENTS TO THE CLAIMS

Claim 1 (Currently Amended): A phosphorescent phosphor comprising a compound expressed by having a MAl₂O₄ crystal structure as a matrix in which, where M comprises of strontium (Sr) and barium (Ba),

europium (Eu) doped to said matrix as an activator, and dysprosium (Dy) doped to said matrix as a co-activator;

an amount of said doped europium (Eu) being more than 1.5% and not more than 5% in terms of mol% relative to a total mole number of the metal elements expressed by M, europium (Eu) and dysprosium (Dy);

an amount of said doped dysprosium (Dy) ranging 0.3≤Dy/Eu≤2 in terms of a molar ratio relative to europium (Eu);

a ratio of aluminum (Al) ranging from 2.1 to 2.9 in terms of a molar ratio relative to a total mole number of the metal elements expressed by M, europium (Eu) and dysprosium (Dy); and

a ratio of barium (Ba) to M ranging $0.03 \le Ba/(Sr+Ba) \le 0.2$.

Claim 2 (Currently Amended): A phosphorescent phosphor comprising a compound expressed by having a MAl₂O₄ crystal structure as a matrix in which, where M comprises of strontium (Sr) and calcium (Ca),

europium (Eu) doped to said matrix as an activator, and dysprosium (Dy) doped to said matrix as a co-activator;

an amount of said doped europium (Eu) being more than 1.5% and not more than 5% in terms of mol% relative to a total mole number of the metal elements expressed by M, europium (Eu) and dysprosium (Dy);

an amount of said doped dysprosium (Dy) ranging 0.3≤Dy/Eu≤2 in terms of a molar ratio relative to europium (Eu);

a ratio of aluminum (Al) ranging from 2.1 to 2.9 in terms of a molar ratio relative to the total mole number of the metal elements expressed by M, europium (Eu) and dysprosium (Dy); and

a ratio of calcium (Ca) to M ranging 0.005≤Ca/(Sr+Ca)≤0.1.

Claim 3 (Currently Amended): A phosphorescent phosphor comprising a compound expressed by having a MAl₂O₄ crystal structure as a matrix in which, where M comprises of strontium (Sr), barium (Ba) and calcium (Ca), europium (Eu) doped to said matrix as an activator, and dysprosium (Dy) doped to said matrix as a co-activator;

an amount of said doped europium (Eu) being more than 1.5% and not more than 5% in terms of mol% relative to a total mole number of the metal elements expressed by M, europium (Eu) and dysprosium (Dy);

an amount of said doped dysprosium (Dy) ranging 0.3≤Dy/Eu≤2 in terms of a molar ratio relative to europium (Eu);

a ratio of aluminum (Al) ranging from 2.1 to 2.9 in terms of a molar ratio relative to the total mole number of the metal elements expressed by M, europium (Eu) and dysprosium (Dy);

a ratio of barium (Ba) to M ranging 0.03≤Ba/(Sr+Ba+Ca)≤0.145;
a ratio of calcium (Ca) to M ranging 0.005≤Ca/(Sr+Ba+Ca)≤0.05; and
a total ratio of barium (Ba) and calcium (Ca) to M ranging
0.035≤(Ba+Ca)/(Sr+Ba+Ca)≤0.15.

Claim 4 (Original): A method of manufacturing an alkaline-earth metal aluminate phosphorescent phosphor, wherein:

an aluminum (Al) compound, a strontium (Sr) compound, a barium (Ba) compound, a europium (Eu) compound and a dysprosium (Dy) compound are mixed so that molar ratios of the elements meet following requirements:

$$0.015 < Eu/(Sr + Ba + Eu + Dy) \le 0.05$$
,

 $0.3 \leq Dy/Eu \leq 2$,

 $0.03 \leq Ba/(Sr+Ba) \leq 0.2$ and

 $2.1 \le Al/(Sr + Ba + Eu + Dy) \le 2.9$; and

a resultant mixture is fired in a reductive atmosphere, and then cooled and ground.

Claim 5 (Original): A method of manufacturing an alkaline-earth metal aluminate phosphorescent phosphor, wherein:

an aluminum (Al) compound, a strontium (Sr) compound, a calcium (Ca) compound, a europium (Eu) compound and a dysprosium (Dy) compound are mixed so that molar ratios of the elements meet following requirements:

$$0.015 < Eu/(Sr + Ca + Eu + Dy) \le 0.05$$
,

 $0.3 \le Dy/Eu \le 2$,

 $0.005 \le Ca/(Sr+Ca) \le 0.1$ and

 $2.1 \le Al/(Sr+Ca+Eu+Dy) \le 2.9$; and

a resultant mixture is fired in a reductive atmosphere, and then cooled and ground.

Claim 6 (Original): A method of manufacturing an alkaline-earth metal aluminate phosphorescent phosphor, wherein:

an aluminum (Al) compound, a strontium (Sr) compound, a barium (Ba) compound, a calcium (Ca) compound, a europium (Eu) compound and a dysprosium (Dy) compound are mixed so that molar ratios of the elements meet following requirements:

$$0.015 < Eu/(Sr + Ba + Ca + Eu + Dy) \le 0.05$$
,

 $0.3 \le Dy/Eu \le 2$,

 $0.03 \le Ba/(Sr + Ba + Ca) \le 0.145$,

 $0.005 \le Ca/(Sr + Ba + Ca) \le 0.05$,

 $0.035 \le (Ba+Ca)/(Sr+Ba+Ca) \le 0.15$ and

 $2.1 \le Al/(Sr + Ba + Ca + Eu + Dy) \le 2.9$; and

a resultant mixture is fired in a reductive atmosphere, and then cooled and ground.

Claim 7 (Original): The method of manufacturing an alkaline-earth metal aluminate phosphorescent phosphor according to claim 4, 5 or 6, wherein a boron compound as flux is added to a raw material; and the resultant mixture is fired.
